

Paul's Product Review

NEW! NIFE's ECM Code Reader Kit and Cookie Cutter

by: Paul Vargyas NIFE Membership Director

Consists of a business size card in a plastic holder with a 304 stainless steel code reader key and a T-15 Torx wrench. Got a check engine light on your Fiero? Simply remove the two Torx screws from the console cigarette lighter cover plate with the T-15 Torx wrench provided, then follow the instructions on the card that tells you how to read the codes by inserting the code key provided into the illustrated ALDL connector. Once you know the code(s), turn the card over and find your code and the reason for the code.

Later, you can access www.fierofocus.com and click on the Tech Tips tab, then ECM Codes, select the code(s) you found, and you will see a complete analysis and check procedure for the code! (Don't leave home without our Code Reader Kit!) The code reader package is only \$5.00 plus mailing costs. Order yours at www.fierofocus.com.

Where else can you get a cookie cutter in the shape of your Fiero? Choose from either the notchback or fastback body style. Made of .047 thick, 18 gauge 304 stainless steel with hand formed nose, and press brake formed with an upper and lower die. The cutters are 5" long and almost 2" tall, and will last a lifetime of cookie making. Decorate your cookies to match your car to serve when friends visit. These cookie cutters are only \$7.00 plus mailing costs and can be ordered at www.fierofocus.com.
